No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                   1 GGATCTTGGAACGAGACGAC......GTCGTCTCGTTCCAAGATCC 1037

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Organ: nervous_normal; Vector: puc18; Site_1: Smal; Site_2: Smal; A min: library was made by cloning products derived from ORSTSE PCR (U.S. Letters Patent application No. 196,716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of Lissue mRNA and cDNA amplification were performed under low stringency conditions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ŏ
                                                                                                                                                                                                                                          /clone="IRROPUGE_SOURCE_ID: Xinga003n11"
/clone="IRROPUGE_SOURCE_ID: Xinga003n11"
/clone=lib="normalized Xenopus laevis gastrula"
/tissue_type="gastrula" (stages 10.5, 11.5 mixed)"
/lab_host="Top-10 F""
/note="Vector: pBluescript SK-; Site_1: EcoRI; Site_2:
Xhoi; DNA was prepared from 2ug of poly A+ RNA (equal parts from stage 10.5 and stage 11.5 gastrulae).
ECORI-Xhoi cut cDNA was then ligated into Unizap-XR (Stratagene) with EcoRI at the 5' end and Xhoi at the 3' end. SS-library phagemids were prepared by mass excision from the original library and normalized by hybridization to biotinylated driver (prepared from the same library by PCR) to Cot-omega of 11. After removal of hybrids and excess driver by streptavidin sepharose chromatography, the ss-phagemids were made double stranded and electroporated into Top-10 F'. Original library by contruction by Bruce Blumberg (cho et al. 1991 Cell 67, 1111-1120). Normalized by Jihwan Song (Song, Cho and Blumberg, unpublished). Note: This is a Xenopus Gene Collection (XGC) library."
